BRRTS #03-44-000167

QUESTIONS:

- 1) How many monitoring wells and piezometers exist and what are their depths?
- 2) How many wells related to the remedial system exist and what are their depths and diameters?
- 3) For the proposed temp wells, can they be 1" diameter or would you like 2" diameter?
- 4) What are the groundwater depths for each of the site wells?
- 5) Could we be provided a site map showing all well locations?
- 6) What is the soil type and depth to bedrock?
- 7) Do you know if the PECFA deductible has been satisfied?
- 8) Will there be any off-site GIS Packages?

ANSWERS:

With the exception of Question #3, #7, and #8, all other information should be in material available at the copy shop or at the DNR files in Rhineland.

Regarding Question # 3, 1-inch diameter casing wells is acceptable.

Regarding Question #7, the deductible was satisfied long ago.

Regarding Question #8, if off-site GIS packets are needed, costs would be approved via a change order since the current data shows no off-site groundwater exceedances.
